

Project NameMiddle Oconee WRF
Operations Building**Project Category**Rehabilitation and
Replacement**Project Cost**

\$2,800,000

Key Elements

1. Construction of new Operations Building

**Project Description**

Design and construction of new one-story Operations Building at Middle Oconee WRF.

Additional Notes

This project replaces a 50-year-old building with a new operations building. The existing operations building is expensive to maintain as there are several water leaks and major mechanical issues within the lab to properly perform required sampling. Unfortunately, renovation is not an option as the operations building controls all the equipment at the Middle Oconee Water Reclamation Facility.

Failure means permit violations which is harmful to public health.
