

Athens-Clarke County Demand Aggregation

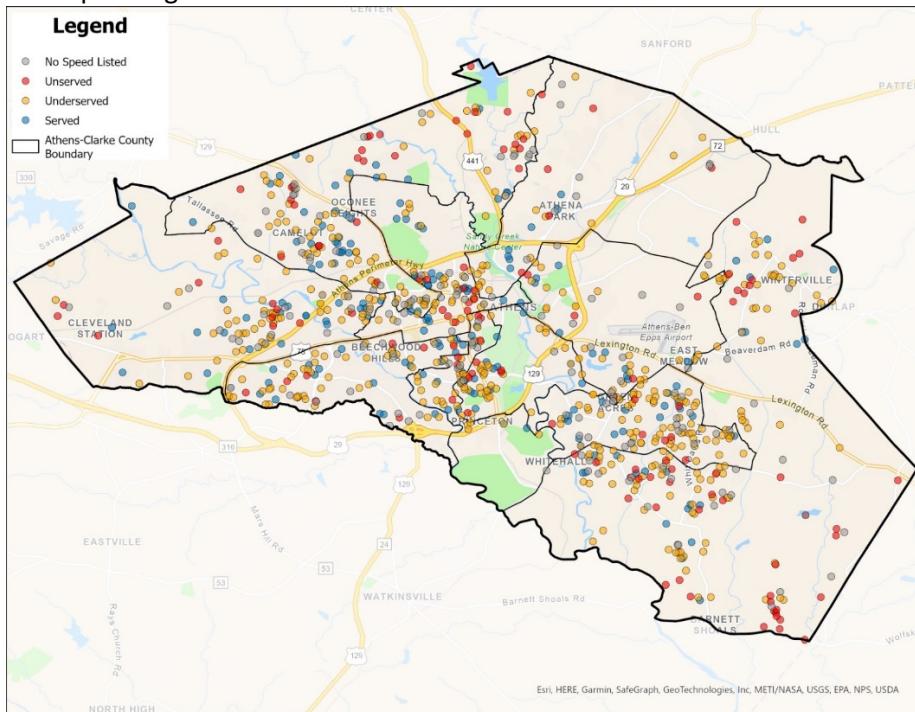

The demand aggregation process for the Athens-Clarke County, GA broadband study began on May 20th, 2022 and concluded on October 3rd, 2022. The demand aggregation survey helped to gather feedback from the community about their technology needs, existing or future Internet service cost, satisfaction with services, and service availability. A total of **952** surveys were recorded, with **931** responses being from a unique address. A total of 9 broadband champions, local advocates in the community, offered their support to spread the word about the survey and were sent custom flyers to distribute. In person community engagement sessions about this process were held on September 14th, 2022 at the Athens-Clarke County Library and on September 17th, 2022 at Athens-Clarke County Fire Department Station #7. The demand aggregation survey included up to 25 individual questions relating to broadband, ranging from "Do you have Internet service today?" to "How important is Internet service availability and/or Internet speed when choosing a location to live?". For respondents with a current Internet service, an Internet speed test was recorded at the end of the survey and placed in the following broadband definitions:

Unserved	Underserved	Served
Less than 25 Mbps Download	Greater than or equal to 25 Mbps but less than 100 Mbps Download	Greater than or equal to 100 Mbps Download
Less than 3 Mbps Upload	Greater than or equal to 3 Mbps but less than 20 Mbps Upload	Greater than or equal to 20 Mbps Upload

** Chart figures may not add up due to rounding*

* Internet speeds are based on the internet speed test unless noted otherwise.

The map below shows the areas where demand aggregation survey responses were received and their corresponding broadband definition.

Internet Service

1. Do you have Internet service today?

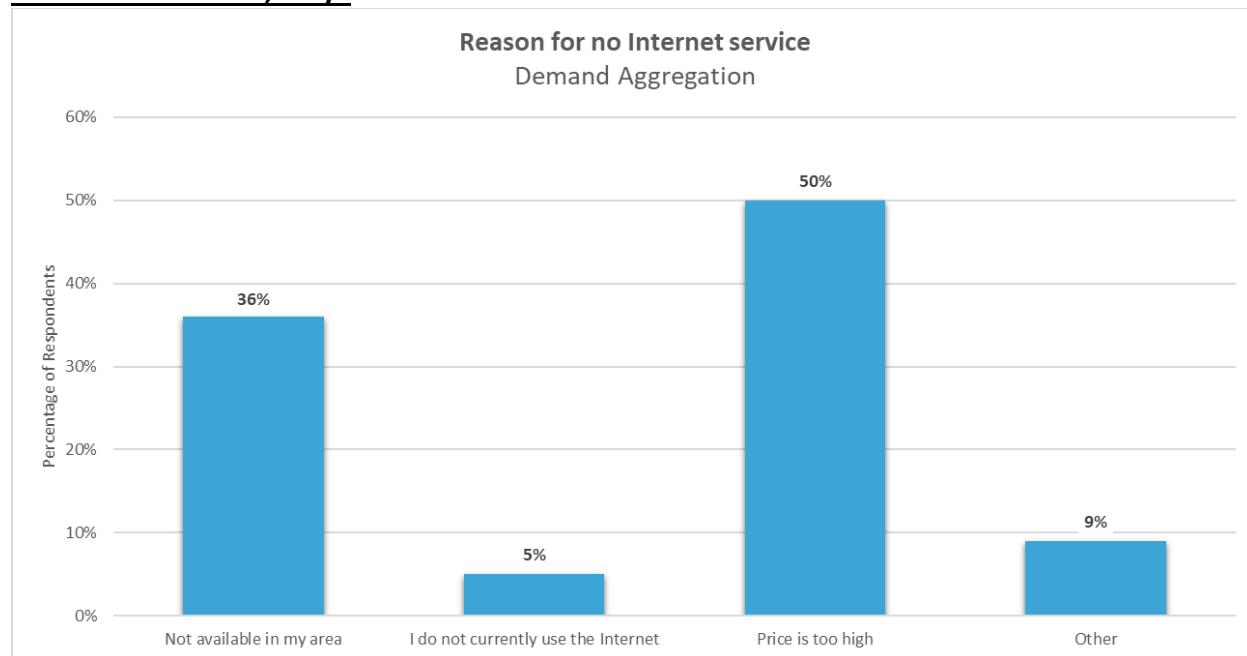

Currently has an Internet service	Respondents	Percentage of Respondents
No	22	2%
Yes	930	98%

Providers

* Cellular providers are excluded from provider table

Internet Service Provider	Respondents	Percentage of Respondents
AT&T	257	31%
Comcast	7	1%
Spectrum	553	67%
Windstream	13	2%

No internet service, why?

Age Group Breakdown

Age Group	Respondents	Percentage of Respondents
18-24	17	2%
25-34	164	17%
35-44	212	23%
45-54	191	20%
55-64	134	14%
65 or older	221	24%

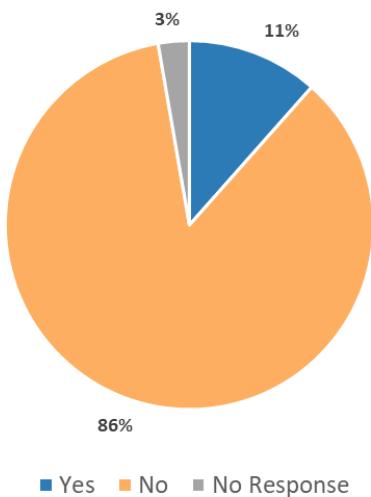

Federal Government Assistance Programs

2. Are you currently receiving any kind of federal government assistance (SNAP, Medicaid, WIC, etc.)?

Residents Participating in Federal Government Assistance

Demand Aggregation

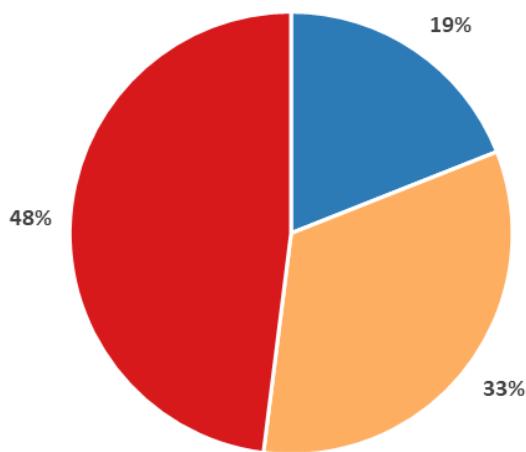

■ Yes ■ No ■ No Response

Interest in Service

Preferred Internet Speed by Building Type (Single-Family Home)

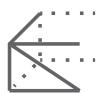

Demand Aggregation

■ 250/250 Mbps Residential SFH

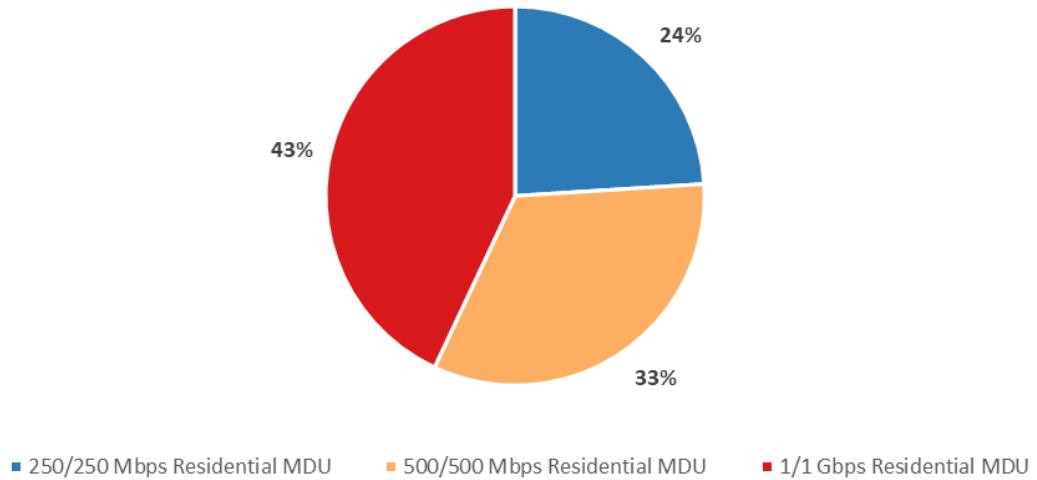

■ 500/500 Mbps Residential SFH

■ 1/1 Gbps Residential SFH

Preferred Internet Speed by Building Type (Multi-Dwelling Unit)

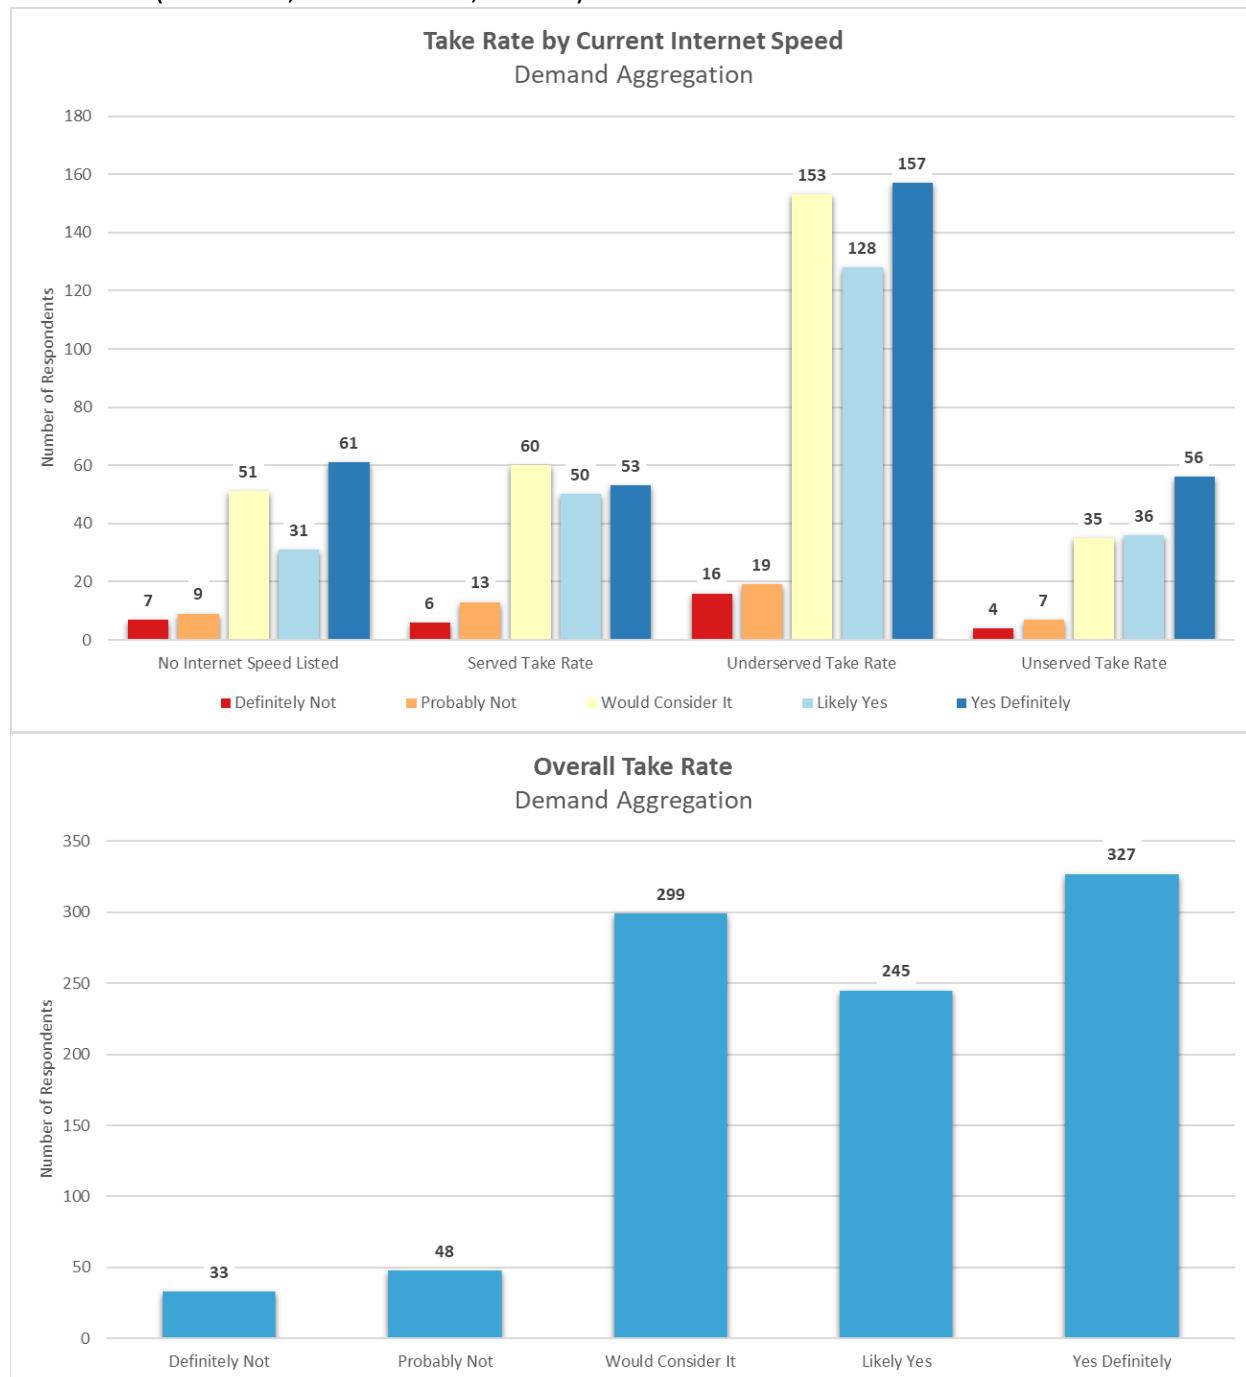

Demand Aggregation

Take Rate Breakdown

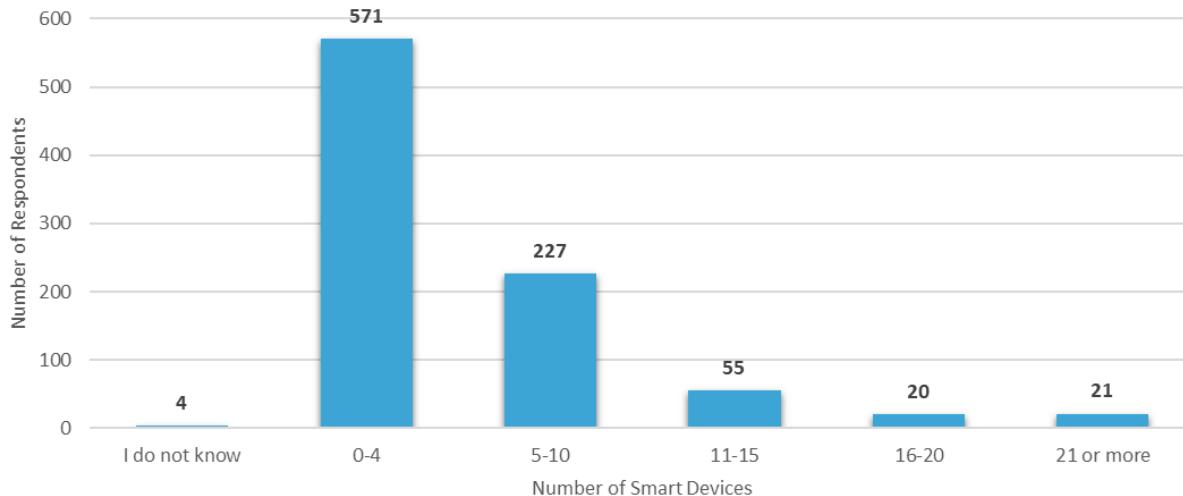

- The take rate is a weighted measurement of a resident's consideration for switching to an improved Internet Service. Definitely Not (0.00), Probably Not (0.25), Would Consider It (0.50), Likely Yes (0.75), Yes Definitely (1.00).
- The “Take Rate by Current Internet Speed” compares how likely a respondent would consider an improved Internet service with their current broadband status (Unserved, Underserved, Served).

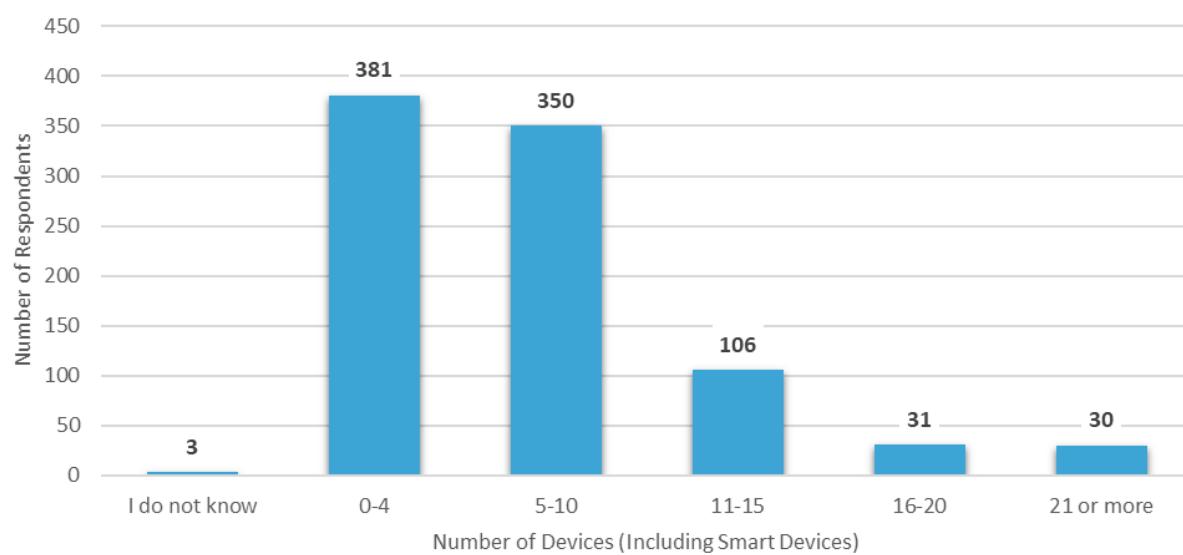

Smart home devices

Smart Devices Per Household
